

ENGLISH TENSION CADDY INSTRUCTIONS

1

Insert plastic sleeves into baskets.

2

Measure from floor to ceiling.

3

Assemble poles to have a length of 1in more than your floor to ceiling height.

4

Twist pole to lock in the length.

5

Disassemble poles and slide baskets onto poles as desired.

6

Secure baskets by tightening set screws with hex wrench until snug. (Do not over tighten!)

7

(A.) First, compress assembled pole against ceiling.

(B.) Then swing bottom of pole into position.

TROUBLESHOOTING

Q: My tension rod won't straighten – it sits at an angle.

A: It is likely the pole was extended more than 1in beyond the height of the ceiling. Reduce the length of the top pole and go to Step 7.

Q: The pole is falling there is not enough tension to keep it upright.

A: The pole was not extended far enough. Increase the height of the top pole and go to Step 7.
